

~~ABSTRACT~~

84  
B1 7 A support device for a cableway of the kind which comprises a number  
of longitudinally extending thread elements positioned at a distance  
5 from each other and transversely extending thread elements connect-  
ing the longitudinally extending thread elements is connectable with  
the cableway for forming a support surface for cables attached to  
the cableway and branched off downwardly therefrom, the support  
device having the object of defining the radius of curvature of the  
10 branches off cables. (Fig. 2)
